

York County Speed Table Program

This program is intended to provide residents with a way to lower vehicular speeds in their neighborhoods, prevent unsafe conditions when no other alternative is available, and provide York County a way to meet citizen requests for safer roads.

Main aspects of a York County traffic calming program

1. Must have resident support
75 percent of residents sign petition
2. Property owners would acquire a per unit cost
Have competitive prices from a construction company on a per unit basis
3. County will maintain
Rebuild when road is resurfaced
Restripe when road markings become faded or peel off
4. County will evaluate for appropriateness
85th percentile speed 10+ mph over posted speed
Daily traffic count of at least 250 vehicles per day
Daily traffic count of no more than 2,000 vehicles per day
Be a County-maintained road
Have no unique site constraints that would result in a dangerous condition caused by the installation of a speed table

Administration

Interested residents and community organizations can submit a Speed Table Program Application to York County Engineering. Once the application is received, York County will send out the Speed Table Program petition for completion and return to the Engineering Department. Once this petition is received, County staff will perform an evaluation of the request and determine if the request meets minimum standards. County staff will determine the location with input from local residents.
