

Know your proximity to a flood hazard:

DO NOT walk or drive through flood waters. There is no way of knowing the depths or velocity of the water. Six inches of moving water can knock you off your feet. More people drown in their vehicles than anywhere else. Remember this phrase:

“Turn around, don’t drown”!

- ◇ **Have** a disaster response plan, discuss it with family members, and stick to it!
- ◇ **Have** a list of emergency numbers and safe places to go.
- ◇ **Report** down power lines to the electrical company or emergency management.
